

Vyom Nishant Patel

16-year-old from Mumbai, India. Currently at [Radcliffe School, Ulwe](#).

CTO of [Teenage Works](#), building [Clarified.ai](#): an AI-native private tutor with a personal whiteboard. [Accepted to Y Combinator Startup School India](#) (~6% acceptance from 30K+ applications) with [\\$10K cloud-credit grants](#) each from [AWS for Startups](#) and [Microsoft for Startups \(Azure\)](#). Mentored by the [AI/DS Lead](#) and [ex-Chief Growth Officer at Physics Wallah](#).

Leading [53,000+ students](#) in India's largest AI community (CBSE × Intel). Built [Artha-1](#), a 400M-parameter language model with a hybrid, non-transformer architecture (Liquid Neural Network core over a T5 latent space). Tested a Quantum Neural Network on real IBM quantum hardware. Selected for [NCERT's PRAYAAS](#) Research Initiative at the national level.

Teenage Works

- > **What:** Clarified.ai, an AI-native private tutor that explains STEM doubts on a personal whiteboard [clarified.ai](#)
- > **Status:** Pre-alpha, DPIIT / Startup India recognized
- > **Backed by:** [AWS for Startups](#) and [Microsoft for Startups \(Azure\)](#), \$10K cloud-credit grants each
- > **Mentored by:** Sandeep Varma (AI/DS Lead, Physics Wallah) and Vivek Gaur (ex-Chief Growth Officer, Physics Wallah)

Projects

Artha-1 LLM. [Open-source 400M-parameter](#) language model with a [hybrid, non-transformer architecture](#): a T5 bottleneck autoencoder compresses tokens into a latent space, where a [Liquid Neural Network core](#) handles the actual sequence reasoning. The point is to test whether a continuous-time recurrent core can replace stacked attention for dynamic reasoning, without giving up the encoding strength of a transformer front-end. Pip-installable as arthaLM. [github.com/Vyomie/Artha](#)

Quantum Neural Networks. Hybrid quantum-classical model with ~2,500 parameters and rotational entanglement gates. Image classification on compressed inputs, tested on [real IBM quantum hardware](#) (not simulators). [github.com/Vyomie/QNN](#)

Adaptive LNN [[under peer review, Springer](#)]. Liquid Neural Networks for continual learning in dynamic environments. [97% success rate](#) in obstacle-rich drone navigation without large-scale pre-training. Submitted to Neural Computing and Applications. [github.com/Vyomie/AdaptiveLearningLNN](#)

VYXM Protocol. Orchestration toolkit for complex AI agent systems.

Hopfield NN Library. Published Python package for Hopfield-network experimentation.

MusiCat. Music-therapy AI that curates Spotify playlists from real-time mood analysis.

Research

01 Adaptive Liquid Neural Networks for Continual Learning [under peer review]. Liquid Neural Networks for continual learning in dynamic environments. Demonstrates *97% success rate* in obstacle-rich navigation without large-scale pre-training, suggesting LNNs as a viable substrate for adaptive control. Submitted to *Neural Computing and Applications* (Springer).

02 Decoding the Voynich Manuscript via Self-Supervised Semantic Mapping [working draft]. Training a self-supervised semantic transformer to learn vector representations of Voynich tokens, then aligning that embedding space against the embedding spaces of known natural languages. The question is whether Voynich tokens cluster and co-occur the way real language does, and if they do, which language family the geometry lines up with. A negative result is also informative: a manuscript that fails to align with any natural-language manifold is evidence for the constructed-language or hoax hypotheses.

NCERT PRAYAAS Research Initiative [selected at national level]. Selected by NCERT under the PRAYAAS programme for ongoing work on Liquid Neural Networks. PRAYAAS is the national-level research initiative run under India's school curriculum body, NCERT, for student-led original research.

Leadership

AI Student Community (CBSE × Intel India). Community leader, Dec 2025 to Mar 2026. Selected as a leader of the *53,000+ member* community: run weekly AI teaching sessions, organize competitions, host events, and manage operations autonomously. aistudent.community

Other. Physics Club Lead. Vice-Captain, Cyber Club (AECS-2, Anushaktinagar).
